FOR FACIAL REJUVENATION

RENÉE

RESTORES YOUR FRESH LOOK

COMPANY

- Qventis GmbH is a medical device start up, that develops and markets high quality, safe, reliable and innovative regenerative medical solutions for medical aesthetics.
- We are strongly committed to develop tailored medical solutions to rejuvenate, boost skin regeneration, promote skin condition and beauty.
- RENÉE range is produced by MATEXLAB SA under exclusive contract manufacturing license.
- Qventis GmbH and MATEXLAB SA are certified companies according to ISO 13485 and ISO 9001

HA STABILISED GELS | HISTORY

- RESTYLANE | First product biphasic

Formulation – dispersion of HA X-linked HA particles (predominantly elastic) in a HA non-X-linked phase

- JUVEDERM | Second product monophasic

Formulation – dispersion of HA X-linked HA particles (predominantly soft and cohesive) in a HA non-X-linked phase

- RENÉE | true monophasic

Formulation – homogeneous X-linked HA gel (predominantly soft, elastic, cohesive and pseudoplastic) – no particles – no non- X-linked HA

- RENÉE is a set of injectables gels based on hyaluronic acid for skin hydration and revitalisation, the skin booster – RENÉE VITAL - and the RENÉE collection – RENÉE PRIME, RENÉE SMILE, RENÉE TOUCH, RENÉE LIFT and RENÉE VOLUME – for dermal restoration.
- RENÉE collection gels have been bionically designed to preserve the natural features of biological hyaluronic acid. Thanks to the bionic design, RENÉE gels have superior rheology - cohesive, elastic and pseudoplastic behaviour – tailored to the different needs of facial rejuvenation.

RENÉE | FEATURES

- Rational and clear product differentiation - through concentration – customised formulations for the intended use.
- RENÉE formulations are enriched with aminoacids – proline and glycine – structural elements of the extracellular matrix.
- RENÉE gels have been designed to mimic the rheological features of endogeneous hyaluronic acid (extracellular matrix) – bionic design.
- RENÉE collection is a set of hydrobalanced smooth and resilient gels, stabilised with low content of BDDE, hyaluronic acid degree of modification: 5-6 %.

RENÉE | FEATURES

- RENÉE collection gels are “true“ monophasic and homogeneous hyaluronic acid crosslinked gels – with no particles and no uncrosslinked, linear HA phase.
- Unique rheological profile: elastic, cohesive and pseudoplastic.
- User friendly, easy to inject.
- Clinically proven safety and efficacy profile.
- Aesthetic results last up to 8 -12 months.

RENÉE REVITALISING SOLUTION

RENÉE VITAL FOR SHINY SKIN

- Formulated with 20 mg /ml of natural, non-crosslinked hyaluronic acid
- Enriched with aminoacids – glycine and proline
- For enhancing skin hydration and condition (face, neck, décolletage, back of hands)
- Natural looking rejuvenated skin

RENÉE COLLECTION

RENÉE collection is a versatile set of soft and resilient hyaluronic gels for facial aesthetics.

RENÉE formulations have been bionically designed to hydrate, smooth and restore soft tissue.

RENÉE DERMAL RESTORATION SOLUTION
